

When you work with Jackson Comfort to install your new home comfort system, you can expect the installation process to be well thought out, extremely thorough and 100% seamless.

## 1. Site Survey

Before we start any project, we send out our expert surveyor to the job site to take measurements for duct work, determine placement of the new system and work out and all installation logistics.

## 2. Custom Fabrication

We take the measurements from our survey and custom fabricate all sheet metal. Everything is done in-house to fit your system perfectly.

## 3. Protection

In preparation for the installation we'll take all necessary measures to protect your home and flooring. We'll lay drop cloths and our technicians will wear shoe booties at all times.

# The Installation Process

## 4. Disposal

We'll carefully remove and dispose of the old system and all associated components.

## 5. Installation

Our technicians will install your new equipment and support systems, including gas piping, wiring, duct transitioning, venting and plumbing.

## 6. Start-Up

We conduct a thorough test of the entire system using our inspection checklist. This ensures maximum efficiency, system longevity, safety and comfort.

## 7. Walk-Through

We'll walk you through the new system, provide operating and maintenance instructions, as well as answer any questions you may have.

## 8. Coverage

We cover all installations with our exclusive Jackson Care Plan, which warranties the entire installation for one year, offers priority service, and culminates in a precision tune-up and safety inspection at the end of the year!

## How Can You Prepare?

- Make sure someone over the age of 18 is home the day your installation is scheduled.
- Remove any obstructions around the existing equipment & make sure all units are easily accessible.
- Keep your pets safe by putting them in a secure place during the installation.
